## Release Notes – CANtrace 4.4

The CANtrace 4.4 release implements a digitally signed installation and uninstallation process, enhances compatibility with Windows platforms and revises internal application warnings and informational texts.

The application now features a signed installation and uninstallation process, ensuring an integrity-verified and safer installation experience. Supported platforms have been reviewed to include only those that are relevant. Warning and information texts within the application have been revised to enhance informativeness and deliver additional user warnings.

A bug affecting silent mode handling on specific Kvaser interfaces has been resolved. Demo license management has been enhanced to improve the overall user experience.

### New Features & Functionality

- Signed installer for application installation and uninstallation
- Supported Windows platform updates
- Application warning and information text updates

### Bugfixes & Improvements

- Certain Kvaser interface invalid silent mode setting fix
- Demo license handling improvements
